the higher the α value, the more likely the system is to be dominated by the higher frequency components. The α value is a function of the frequency of the input signal, the frequency of the system, and the frequency of the noise. The α value is a function of the frequency of the input signal, the frequency of the system, and the frequency of the noise. The α value is a function of the frequency of the input signal, the frequency of the system, and the frequency of the noise.
